MEDIA RELEASE

SMS Management & Technology leads Internet Kiosk Trial

Sydney, April 19, 2005 –

Leading Australian business and technology consultancy, SMS Management & Technology (ASX: SMX), is pleased to announce it is leading a trial of an internet kiosk application in conjunction with Telstra Corporation Limited (Telstra) and pieNETWORKS Limited (Pie).

Consistent with SMS's announced strategy to engage in more outcome based projects, SMS has taken the lead in designing a business and technology solution that brings together Pie and Telstra for this trial.

The 10 week trial will assess the performance of 10 pieLINK kiosks operating at a variety of locations, including hotels, train stations, shopping centres, caravan parks and even a mine site. Pie's G3 kiosk feature sit down access, high speed internet access, secure internet banking, Text Messaging, email and broad web capability.

"I am pleased to see another example of SMS conceive an opportunity, architect a solution and take the concept to the client in an unsolicited way. SMS's involvement to project manage the deployment is a natural fit with our established strengths" said Tom Stianos, Chief Executive Officer, SMS.

About SMS Management & Technology
